

BUSINESS GAMES: I-PLAN

Why I-plan?

It is often said, "Proper preparation prevents poor performance." This is especially true when a plant shutdown is on the schedule.

Having a clear and detailed shutdown process has many advantages. It allows you to carry out all necessary sustainable maintenance operations during a shutdown and ensure equipment reliability. Good planning and scheduling facilitate a timely, accurate and safe restart. This way, you can avoid production losses, shutdown costs, and indirect expenses.

This also works in day to day maintenance operations.

Goal of the game

I-plan is an exciting and interactive way of simulating a real shutdown with all the typical challenges of a real one; parts management, resource restrictions, quality issues, problems with contractors, challenges in scheduling, work execution management, etc.

The organization and efficiency of the process become apparent, and the advantage of a clear and detailed shutdown process will result from this simulation experience.

Details

- ✓ Facilitated by experienced subject matter experts
- ✓ Duration: 1 or 2 days
