

# I-care™

## PREDICTING THE UNPREDICTABLE

with our Wi-care as a Service (WaaS)

### ENSURE MACHINE HEALTH WITH WAAS

Backed by powerful and accessible hardware and software technology, we deliver deep analytics and insights to make better asset management decisions to:

- Eliminate unplanned machine downtime
- Determine when any particular asset needs maintenance
- Carry out the right maintenance actions at the right time

### WHAT IS IT

- Hardware: Network and Sensors (based on your strategy)
- Installation: Supported by your professionals or full install by an I-care expert
- Analysis: Monthly, Bi-Monthly,
- Alarm Management: based on your strategy, or criticality
- Reporting: Cloud-based integrated reporting
- Support: Optional Expert Kits for monitoring troubled assets
- Warranty: Full product warranty for the period of contract length

## WHY CONSIDER WAAS

Predictive Maintenance programs vary in size and maturity levels. Organizations that have successfully made the digital transformation have adopted the right-fit technology applications to their desired maintenance strategies.

WaaS is the perfect fit when:

- Your organization is looking to accelerate or scale its maintenance 4.0 transition by implementing partial or full wireless monitoring solutions for its asset base.
- Your organization requires flexible investment options to leverage wireless IoT technology as part of its predictive maintenance strategy.
- Your organization wants to improve its analytical capabilities and receive process optimization recommendations to ensure desired performance outcomes are met.

## HOW WE DO IT

Our 4.0 implementation teams work with the client to ensure a smooth wireless monitoring transition.

- Data acquisition (onsite installation of the hardware)
- Data configuration
- System commissioning for the hardware
- Periodic health check of the system
- Predictive analytics (baseline and monthly analysis, continuous improvement)
- Alarm management and call to action recommendations
- Program oversight (standard dashboard setup, project management, follow up meetings)
- Process optimization recommendations

## WAAS BENEFITS

The WaaS delivery model provides numerous benefits:

- Improved machine health, asset uptime
- Reduction in maintenance costs
- Improved safety
- Reduced downtime
- No equipment to own and easier upgrades to the latest technology.
- Match your desired maintenance strategies with the right technology (sensors) and financial expenditure models
- Backed by domain experts from set up to ongoing execution
